

DAM® 390 FERTILIZER CE

Composition, properties, appearance:

DAM® 390 is a clear to slightly yellow solution of ammonium nitrate and urea. This liquid fertilizer contains 30% nitrogen. The ratio of ammonium, nitrate and amide nitrogen is 1: 1: 2.

Technical specification:

| | |
|----------------------------|----------------------------|
| total nitrogen content (N) | 30% by weight 7.5% |
| nitric nitrogen content | by weight 7.5% by |
| ammoniacal nitrogen | weight 15.0% by |
| content urea nitrogen | weight max. 0.2% by |
| content biuret content | weight |

Application:

DAM® 390 can be used for basic fertilization before sowing or planting. This solution is ideal for additional fertilization outside the root during vegetation, with a solution diluted in a concentration of 0.2 - 0.3%. It can also be used to speed up the decomposition of straw and bark buried under plowing. The application of permitted DAM® combinations with chemical plant protection preparations is also profitable.

Reference dosage in l per ha:

| PRODUCT | DOSAGE OF FERTILIZER FOR 1 YEAR |
|---------------------|---------------------------------|
| cereals | 150 – 350 |
| root crops oilseeds | 200 – 400 |
| forage plants | 250 – 350 |
| vegetables | 100 – 150 |
| | 150 – 200 |

The recommended doses are informative; you must respect the nutrient intake of the soil, the expected yield and the possibilities to combine the fertilizer with other types of fertilizers.

Packing:

DAM® 390 is loaded into tank cars, car tanks or unpressurised polyethylene containers. Following an agreement with the purchaser, use containers of 1 to 5 liters or other suitable containers with a maximum weight of 15 kg for small consumer packages.

Storage:

Avoid total or local overheating above 60 ° C or sub-cooling below -10 ° C during storage. The product in small packages must be stored in the original containers intact and closed, in dry, hygienic, clean and well-stored ventilated, separately from food, beverages, feed, pesticides and their containers.
